

LAB 5: MATLAB GUI & ARDUINO PROGRAMMING

BROUGHT TO YOU BY....

Henry Liu, Nathaniel Seekins, & Alexis Yu

LAB 5 OVERVIEW / OBJECTIVE (Nate)

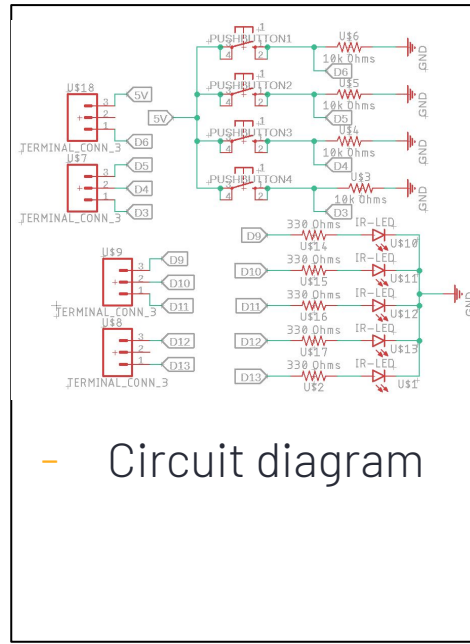

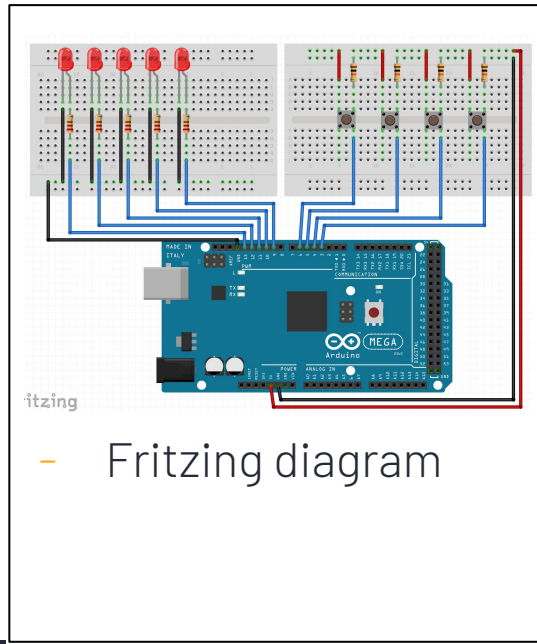

- Creating a whack-a-mole game
- Using experience and understandings of Arduino and MATLAB GUI
- Building circuits from fritzing and circuit diagrams
- Using OnShape to 3D prototype this game

CHALLENGE #1 (Nate)

- Create a circuit that contains four buttons and 5 led lights
- Have an led light up when the buttons have been pressed twice (any of them or the same one)

CHALLENGE #1 (Nate)

Useful resources:

Push Button Reference

LED Reference

Checking for a button
press in Arduino

CHALLENGE #2 (Henry)

- Incorporate a piezo buzzer into the circuit built from Challenge #1
- Have each button press emit a sound
- Play a tune when all of the LEDs are illuminated

CHALLENGE #2 (Henry)

- Fritzing diagram for circuit to be constructed in Challenge #2
- An extension of Challenge #1
- Adds a piezo buzzer
- Introduces parallels series and mathematics of total resistance

CHALLENGE #2: Coding a Piezo Buzzer Basics (Henry)

```
//A sketch to demonstrate the tone() function

//Specify digital pin on the Arduino that the positive lead of piezo buzzer is attached.
int piezoPin = 8;

void setup() {
  //close setup
}

void loop() {

  /*Tone needs 2 arguments, but can take three
  1) Pin#
  2) Frequency - this is in hertz (cycles per second) which determines the pitch of the noise made
  3) Duration - how long teh tone plays
  */
  tone(piezoPin, 1000, 500);

  //tone(piezoPin, 1000, 500);
  //delay(1000);
}
```

- Initialize piezo buzzer to a pin
- Set a frequency (Hz) for the sound pitch
- Set a time duration in milliseconds to emit sound
- Difference between delay and sound duration is the pause time in milliseconds

CHALLENGE #3 (Alexis)

- Develop front end of MATLAB GUI Whack-A-Mole game
- Must contain start button, score counter, four non-visible buttons, four visible buttons, an edit text box, and mole graphics

Challenge #3 (Alexis)

- Example GUI
- We will develop GUI into game in challenge #4
- Lay Out Apps in App Designer View
- Create a Simple App Using GUIDE

CHALLENGE #4 (Alexis)

- Program Whack-a-Mole game using GUI
- Players must click on a mole within a certain time period to receive point
- Will implement callback functions and counters

References:

[Startup Tasks and Input Arguments in App Designer](#)

[Display Graphics in App Designer](#)

CHALLENGE #4 (Alexis)

The user will need to write:

- 4 callbacks for the buttons underneath the moles
- A callback for the start button
- A function that will randomly display a mole
- Add 1 point to the score counter whenever a mole is hit and subtract one whenever a button is wrongly hit
- Have the text say congratulations once the score reaches 10 points

CHALLENGE #5 (Nate)

- Arduino and MATLAB GUI will be integrated to create Whack-a-Mole game
- Create an Arduino controller using the circuit components from Challenge #1

- Read Streaming Data from Arduino Using Serial Port Communication

CHALLENGE #5 (Nate)

We will be using several new functions that will let MATLAB control the arduino including:

- readDigitalPin
- playTone
- writePWMVoltage

<https://www.mathworks.com/videos/arduino-and-matlab-reading-inputs-and-writing-outputs-106502.html>

CHALLENGE #6 (Henry)

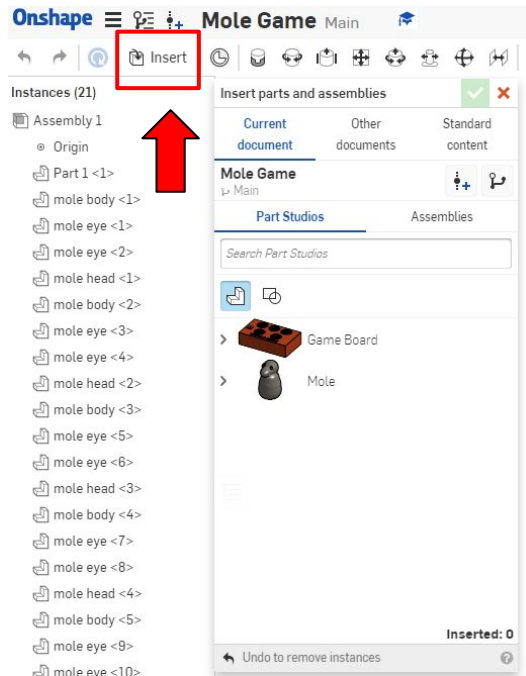

- Create a 3D prototype for what this game may look like at an arcade using OnShape

CHALLENGE #6 (Henry)

- Examples of what we will be creating
- Idea is to create individual parts
- Put them together using OnShape's assembly feature

CHALLENGE #6 (Henry)

- Navigate to assembly tab on the bottom of the screen
- Use insert to include the parts you have created
- Drag the parts into place with transform capability

LAB 5 RECAP

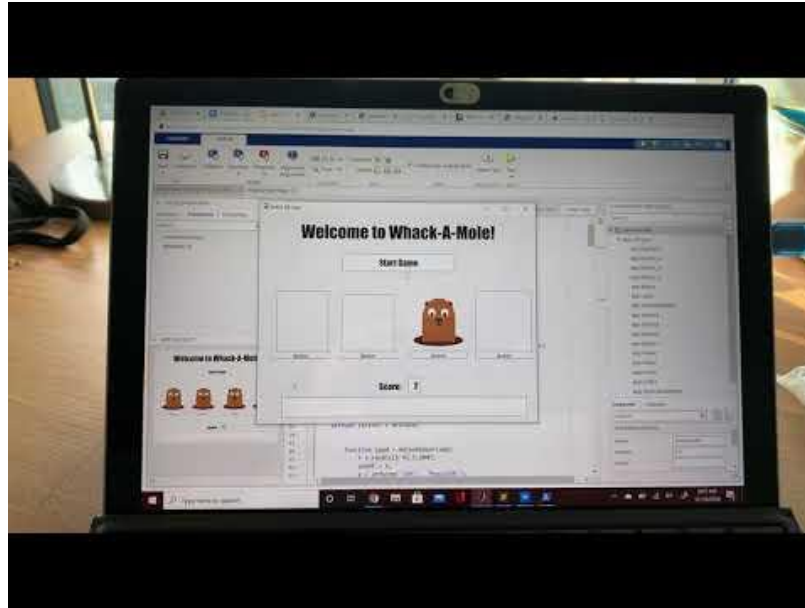

CHALLENGE #1 DEMO (Alexis)

CHALLENGE #2 DEMO (Henry)

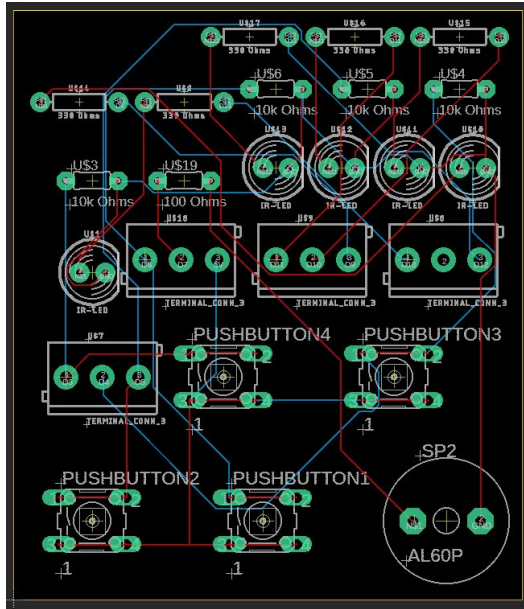

CHALLENGE #3, #4, & #5 DEMO (Alexis)

CHALLENGE #6 DEMO (Henry)

PRINTED CIRCUIT BOARD (PCB) (Henry)

- Example of what our game circuitry would look like if we were to manufacture a PCB for it
